

# CLEAN UP

How a ghost farm  
is removed

**OPERATION GHOST FARMS**

**Preparing the clean-up of  
an abandoned fish farm is a long  
and complex process.  
It can take up to two years  
before operations begin.  
Missions like Operation Ghost  
Farms require months of work—  
permits, logistics, international  
partnerships, and fundraising.  
A quiet but essential effort  
that turns an environmental  
challenge into concrete action,  
care, and renewal.**

BUROCRACY

LOGISTIC

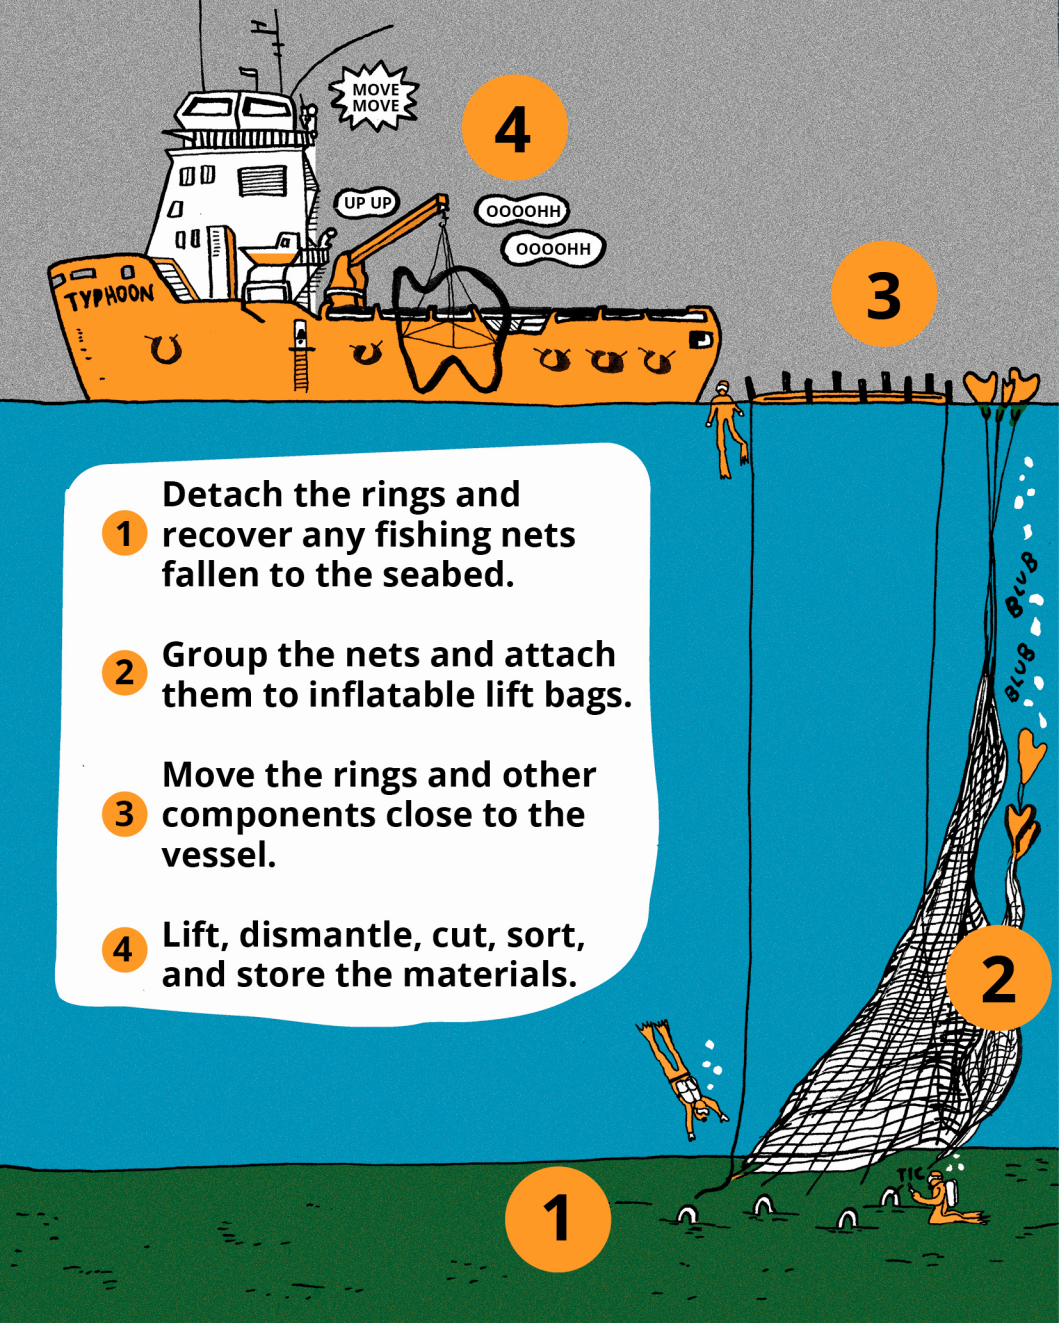

ALLIANCES

FUNDRAISING

**Unlike other missions, where  
logistics were supported  
from land and materials  
were brought ashore,  
in Methana in 2025  
everything happened at sea.  
Operations were carried out  
with the support of the Typhoon,  
a vessel of the Athanasios  
C. Laskaridis Charitable  
Foundation, specially equipped  
for this kind of work.**

3

1 Detach the rings and recover any fishing nets fallen to the seabed.

2 Group the nets and attach them to inflatable lift bags.

3 Move the rings and other components close to the vessel.

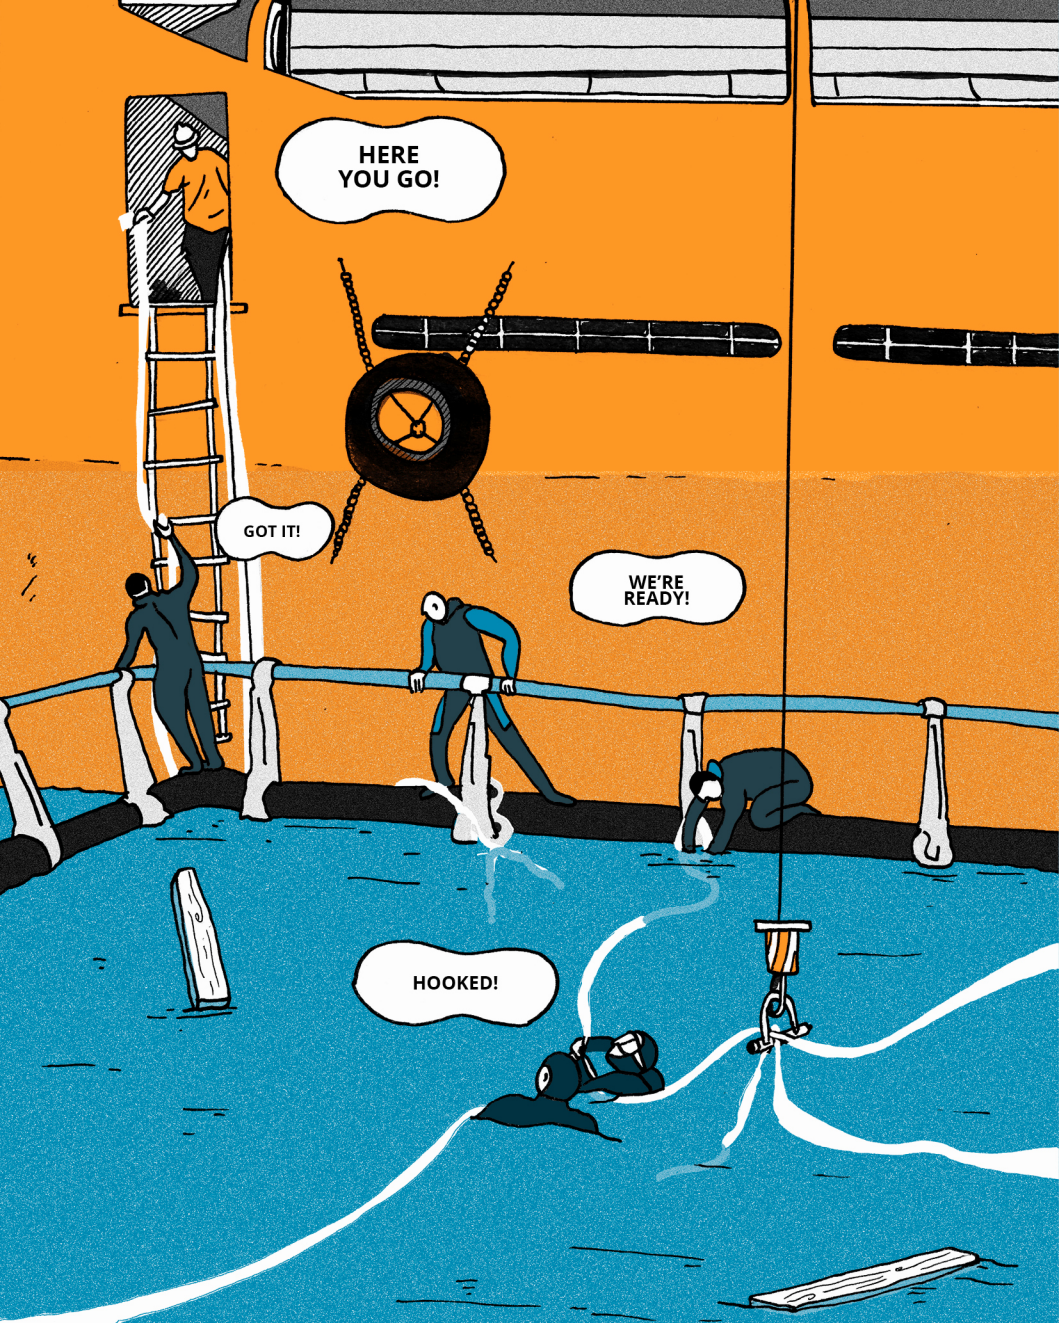

4 Lift, dismantle, cut, sort, and store the materials.

1

**Coordination between the Typhoon crew and Ghost Diving volunteer divers is essential—for efficiency, safety, and environmental protection.**

HERE  
YOU GO!

GOT IT!

WE'RE  
READY!

HOOKED!

**On board, the Typhoon can  
dismantle the rings  
and separate materials for  
disposal and recycling.  
This is made possible by  
a mechanical crane  
and a highly specialized team.**

**No two sites are ever  
the same.**

**Each location demands different  
solutions, constant adaptation, and  
creative problem-solving.**

**What makes the difference is  
teamwork—divers, crew and partners  
working together to turn complexity  
into action  
and solutions.**
