

NET WORK

The village behind
the mission

OPERATION GHOST FARMS

**Cleaning an abandoned fish farm
is never a solo action.
Led by the **Healthy Seas
Foundation**, each clean-up brings
together a network of people, skills,
and institutions. It takes a village
to reclaim the sea!**

Finding the problem

**Every mission starts by making
the invisible visible.**

**Healthy Seas works with partners
like OZON, which surveys coastlines,
maps abandoned sites, and identifies
possible abandoned fish farms (ghost
farms) that need urgent action.**

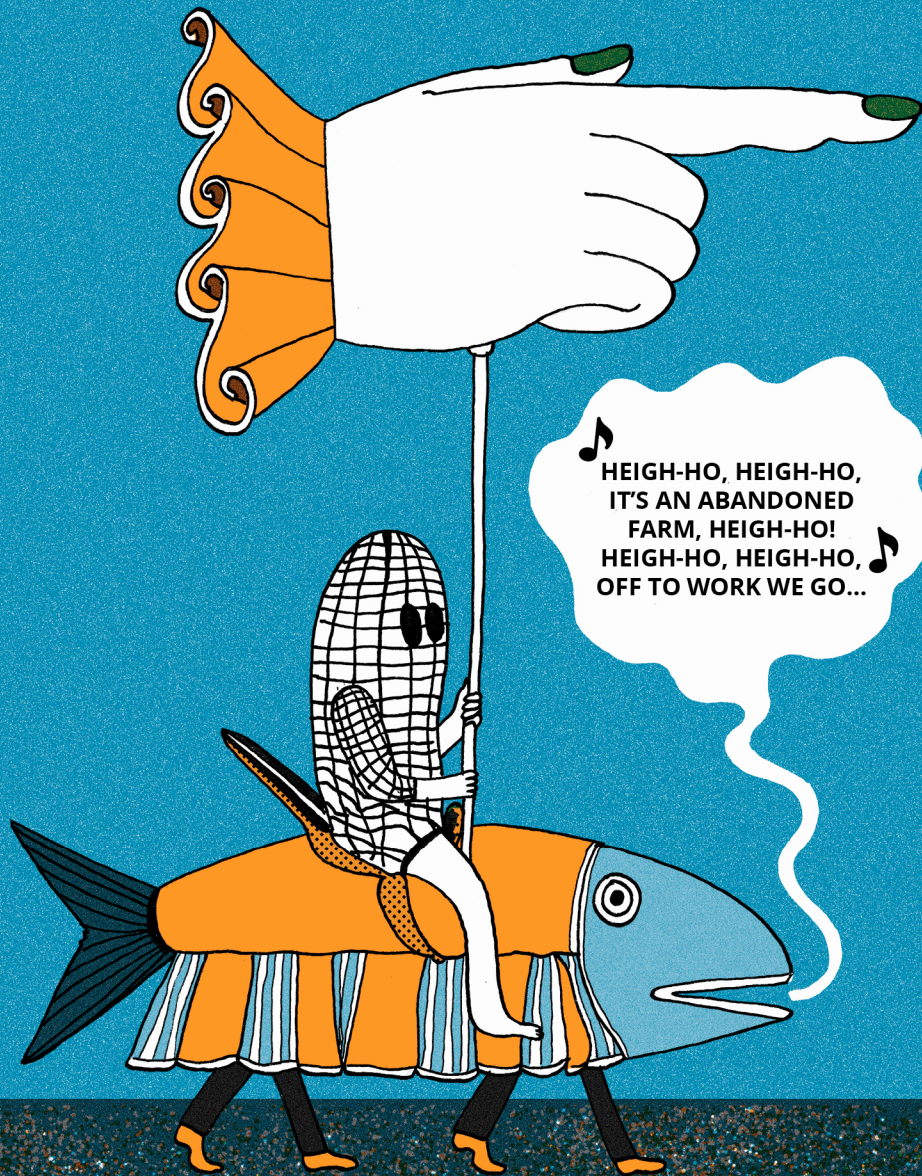

IF YOU LOOK
CLOSELY...
I'M RIGHT
BEHIND YOU.

Making it possible

**Before any dive begins,
coordination is essential.
Together with legal teams,
municipalities, and regional
and national authorities,
Healthy Seas navigates permits,
access, and regulations.**

**With the support of public
authorities, including the Embassy
of the Kingdom of the Netherlands
in Greece, the Region of Western
Greece, and the Decentralized
Administration of Attica,
permits and access are secured.**

Acting

**Once approved,
the operation moves out to sea.**

**In 2025, in Methana, Greece,
with the support of the Athanasios C.
Laskaridis Charitable Foundation,
the vessel Typhoon
and its crew are deployed.**

**Volunteer divers from Ghost
Diving work underwater to remove
structures and recover nets.**

**The mission is supported
by logistics partners coordinating
equipment and transport.**

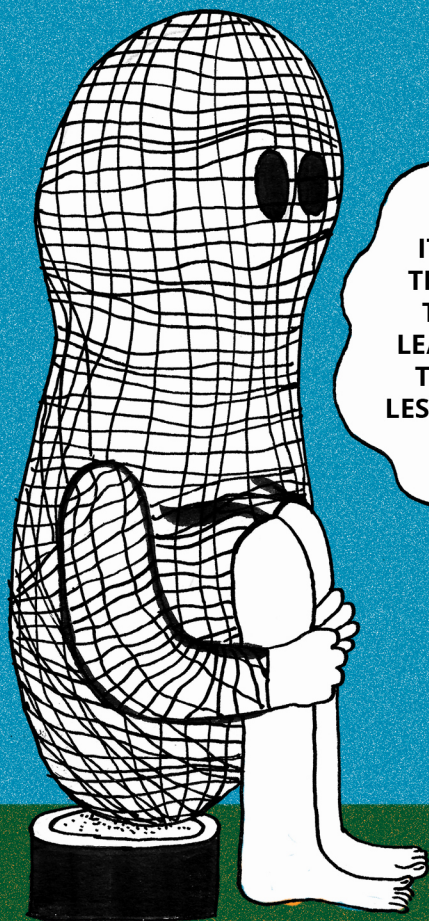

From waste to material

**Recovered nets are handled
by partners of Healthy Seas
along the value chain.**

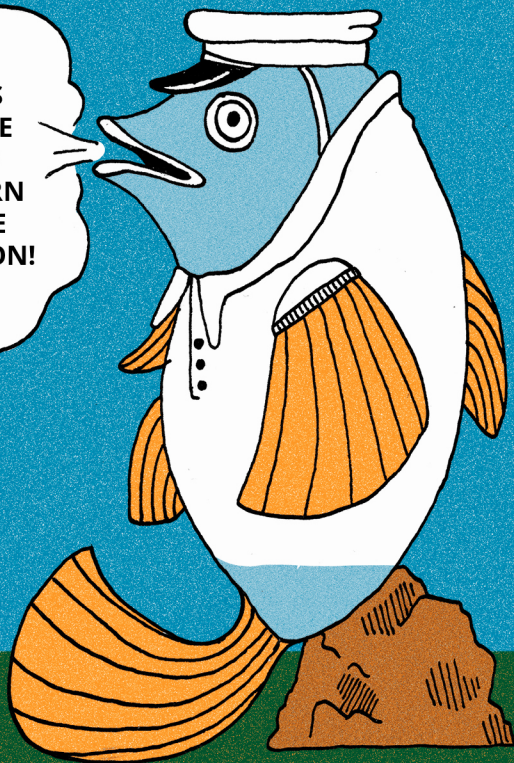

**Diopas stores the materials.
Aquafil, regenerates the nylon
into ECONYL® yarn.**

**DOTANK Plus supports strategy
and long-term impact.**

**Since 2021, Hyundai has helped
make these complex
operations possible.**

IT'S
TIME
TO
LEARN
THE
LESSON!

Beyond the clean-up

The work doesn't end with removal. Together with the European Outdoor Education Hub, SEADEA and its own education team, Healthy Seas turns each clean-up into learning—sharing knowledge and best practices with students, families, and communities.

**Because restoring the sea
is a collective effort.**

**And every part
of this network matters.**
